PROFESSIONAL SUMMARY

Software Developer and Tester at remitcore, and Software Engineering student, who builds scalable web platforms, financial tools and enterprise systems. Joined remitcore as a development intern in 2025. Specialized in event-driven backends with Java Vert.x, web applications with Java and Laravel, mobile apps with Flutter and Kotlin, and reactive interfaces with Vue.js, Vuetify and Tailwind CSS, backed by PostgreSQL and MySQL. Has shipped live platforms on custom domains, with a focus on modular design, database integrity and non-blocking asynchronous processing.

TECHNICAL SKILLS

- **Backend:** Java (Eclipse Vert.x), PHP (Laravel), Python, C, RESTful API architecture, asynchronous event loops
- **Frontend:** Vue.js, Vuetify, Tailwind CSS, JavaScript (ES6+), HTML5, CSS3
- **Databases:** PostgreSQL, MySQL, schema design and migrations, relational data modeling
- **Tools & DevOps:** Git and GitHub, Render deployment, DNS and custom domains, Linux / Ubuntu
- **Data & Compliance:** Power BI, Python (pandas), Excel
- **Mobile:** Flutter, Kotlin
- **Design:** Figma, responsive UI design, landing pages, component styling

EXPERIENCE

Software Developer & Tester | remitcore – 2026 – Present

- Member of the remitcore development team, working on the remitcore website and on CountComply, the AML/KYC and compliance management platform.
- System development and system design with Java Vert.x and PostgreSQL on the backend.
- System testing.
- Mobile app development with Flutter and Kotlin.

Software Development Intern | remitcore – 2025

- Compliance work using Excel, data analysis using Power BI and Python (pandas), and API testing.

SELECTED PROJECTS

Live platforms and websites

BioPay | Biometrics – biopay.africa

- Offline-first biometric registration, payment and voucher infrastructure for humanitarian programmes.
- Worked on the whole platform: Vue.js frontend, Java / Python backend and Kotlin mobile app, with ONNX-based liveness detection.

remitcore | Website – remitcore.com

- Public website for remitcore, a money transfer and currency exchange platform, built as part of my work on the remitcore development team.

Salaryd | HR Tech – salaryd.com

- HR and payroll platform covering payroll, tax deductions, attendance, recruitment and employee records.
- Java Vert.x, Vue.js and PostgreSQL, with responsive pitch-style landing pages.

CountComply | Compliance – countcomply.com

- AML/KYC and compliance management platform: screening, policies, enterprise risks, reminders, filing tracking and board oversight.
- AI-assisted AML/KYC screening, obligations and filings tracking, and audit trail (Java Vert.x, Vue.js, PostgreSQL).

Automoti (Derrick Gallery) | Web Platform – automoti.site

- Vehicle listings platform for the Kenyan market built with Laravel and Tailwind CSS.

- Custom database migrations and REST routes; deployed on Render with custom DNS and Search Console indexing.

Enterprise systems

MedicAid (HMS) | Healthcare – In production

- Electronic medical records, doctor appointment scheduling and patient history logging (Java Vert.x, Vuetify, PostgreSQL).
- Structured dashboard layouts and UI guidelines for smooth frontend and backend handoff.

Accounting System | Finance – In production

- Double-entry system for ledgers, general journal entries, accounts payable/receivable and automated financial reporting (Java, MySQL).

Canteen System | Operations – In production

- Food ordering, e-commerce and point-of-sale system with online ordering, digital menu management, inventory with automatic stock deduction on every sale, role-based order processing, meal ticket issuance and live M-PESA STK push payments through Safaricom Daraja (Java Vert.x, Vue.js, PostgreSQL).

School Management System | Education – built and tested locally

- Multi-tenant platform with 28 event-bus services covering admissions, fees, attendance, exams, timetable, library, hostel, payroll and analytics, with JWT sign-in, OTP and authenticator 2FA, and per-school module switches (Java Vert.x, Vue.js, TypeScript, PostgreSQL).

Side projects

- Timer (C), Translator (Python) and Avatar Maker (Python): small practice projects, source on github.com/derrickbarasa.

EDUCATION

BSc Software Engineering (In Progress) | The Co-operative University of Kenya

CORE COMPETENCIES

- **Modular design:** Clear modules and services so features grow without breaking the rest of the system.
- **Database integrity:** Careful schema design, migrations and relational modeling, from ledgers to patient records.
- **Shipped, not just built:** Deployed on Render with custom domains and DNS, running live for real users.
- **Self-directed:** Works independently from rough drafts or briefs to production-ready platforms.

Languages: English (Proficient, B2/C1)
